| Level          | Level AB                                                                                                                                                                 | Level BC                                                                                                                                                                                        |
| Characteristic | It grows close to the tree’s core, is rich in oil, and has a dense texture. It is resistant to moisture, sun, and insects. It resists cracking and is extremely durable. | It’s sourced from the outer layer of tree trunks and has a relatively short lifespan. While it offers some protection against moisture, sun, and insects, it’s not as durable as AB-grade wood. |

|                            |                                                                                     |                                                                                     |  |
